Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Report	AS1	2,000 word illustrated report: contextualising the Anatomy of a Building studio project in 4121ASA	50	
Essay	AS2	2,000 word illustrated essay: relating to the lecture series with topics linking multiple lectures	50	

Aims

To become familiar with historically significant buildings and to understand the

relationship of these buildings to their contexts.

To recognise themes in specific objects, which have influenced architectural thought and discourse.

To be aware of how architectural ideas have emanated from certain cultural conditions, and their relevance to society then and now.

To be able to develop a coherent argument with reference to the lecture series and individual research.

To demonstrate the above by the production of an illustrated and fully referenced essay.

Learning Outcomes

After completing the module the student should be able to:

- 1 Demonstrate a knowledge of the major historical theories, movements and buildings which have influenced design in architecture.
- 2 Communicate a knowledge of the role of architectural precedent and its connection to social, economic and technical contexts.
- 3 Demonstrate a knowledge of how the theories, practices and technologies of the arts influence architectural design.

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Report	2	
Essay	1	3

Outline Syllabus

The purpose of this lecture series is to provide a 'Geography of Architecture' an overview of the range of architectural history. The course is delivered in two lecture series.

The first is a series of fourteen lectures by various members of staff dealing with the principal seminal developments in building and architectural space from antiquity to the twentieth century in a chronological order. Each building and space and each period and its creator are firmly placed in their political, social and cultural context. The students are made aware how art, technology, economy, environment and society have influenced the evolution of architecture.

The second is a series of 6 case studies of historically important buildings or building typologies illustrating key advances in building technology. Each case study has two associated lectures; one placing the case study in its socio-economic and cultural context the other examining relevant technological innovations demonstrated in the case study.

In 4 related seminars students are introduced to the importance of academic research and essay writing and are given guidance in the proper preparation of their reports and essays.

Learning Activities

The module uses numerous carefully chosen buildings and their contexts to offer the students an overview and grounding in the history of their predecessors in the architectural disciplines including urban design and landscape design. Interpretative accent is placed on the continuity of innovation and the role of architecture in the representation of culture through thematic thought. The emphasis is on a global review of history and theory. Students will produce a fully referenced and illustrated report & essay which conforms to standards for academic writing

Notes

Welcome to the History & Theory 1 module. The course is delivered as a series of lectures, presented by studio tutors from all years of the programme, and dealing with the principal seminal developments in architectural design from antiquity to the twentieth century. Here you will be made aware of how art, technology, economy, environment and society have influenced the evolution of architecture. The single assessed submission for this module is a fully illustrated, academically referenced essay.
