

Liverpool John Moores University

Title: DESIGN PRINCIPLES AND CIVIL ENGINEERING TECHNOLOGY
Status: Definitive
Code: **4300CIVH** (123235)
Version Start Date: 01-08-2021

Owning School/Faculty: Civil Engineering and Built Environment
Teaching School/Faculty: Civil Engineering and Built Environment

Team	Leader
Atif Rasheed	Y

Academic Level: FHEQ4
Credit Value: 20
Total Delivered Hours: 48
Total Learning Hours: 200
Private Study: 152

Delivery Options

Course typically offered: Standard Year Long

Component	Contact Hours
Lecture	24
Workshop	24

Grading Basis: BTEC

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Presentation	AS1	GROUP PRESENTATION	50	
Portfolio	AS2	2500 WORD INDIVIDUAL CONTRIBUTION	50	

Aims

To provide the student with a fundamental understanding of the design process and the management of the building and planning process.

To help students develop the ability to apply, analyse and evaluate the design process with consideration of sustainability, cost, time and quality.

To encourage students to reflect on their level of competency regarding employability skills and identify opportunities for developing these skills.

Learning Outcomes

After completing the module the student should be able to:

- 1 Understand the planning, design and production phases of the construction process and describe the co-ordination and management of each phase.
- 2 Discuss the various factors that affect the selection of materials, systems and equipment and evaluate the environmental impact of energy and other constraints on the planning, design and construction process with consideration of the Building Regulations.
- 3 Demonstrate the outcomes of a relevant feasibility study relating to the construction project including material, cost and time considerations.
- 4 Describe the roles, responsibilities and obligations (including liability for health and safety and welfare) of all parties to a construction project.
- 5 Demonstrate how technology affects the design of a construction project and also the design process and procedures used in the production phase.
- 6 Identify and reflect upon the aspects of the project that led to personal development and improvement in team working skills to achieve the final submission.

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

GROUP	3						
PRESENTATION							
2500 WORD INDIVIDUAL	1	2	3	4	5	6	

Outline Syllabus

Planning and design of a project: The client's brief, aesthetics of the project and the process, influence of shape, size and proportion, position, location and structural considerations of a building, an engineering project or a plant system, content of the project.

Land Issues: Effects of green/brown field sites and reclaimed land on a project.

Health, Safety and Welfare: Issues in design, maintenance and demolition together with understanding of methods and theories used to construct substructures including excavations and the application of the current CDM Regulations.

Financial Considerations: Financial implications and sources of funding, financial planning including the cost of building, the cost of commissioning, costs in use, life cycle costing, cost modelling and facilities management.

Planning and control considerations: Legal restraints, town and country planning, Building Regulations and European legislation.

Design Considerations: Designing for planned use, designing for inclusivity, for change of use, for versatility, designing for disability, relevant legislation and Acts of Parliament.

Materials selection: Systems and equipment and environmental impact.

Environmental Planning: The selection of materials and the form(s) of construction, use of new and renewable resources, use of recycled materials where appropriate.

Energy efficiencies: Production of materials, processing of materials and services within the building or project.

Learning Activities

Lectures and interactive workshops.

Notes

Case studies will be used in order to develop a working knowledge of the design and planning processes used in the construction industry. Where appropriate, role-play will be encouraged to develop a better understanding of the subject matter together with the difficulties that are encountered in the design and the planning of a construction project. Students will normally work in groups to present scenarios for discussion and an element of peer review will be used to develop understanding.
