

Thermodynamics and Fluid Mechanics 1

Module Information

2022.01, Approved

Summary Information

| | |
|---------------------|--------------------------------------|
| Module Code | 4509USST |
| Formal Module Title | Thermodynamics and Fluid Mechanics 1 |
| Owning School | Engineering |
| Career | Undergraduate |
| Credits | 20 |
| Academic level | FHEQ Level 4 |
| Grading Schema | 40 |

Teaching Responsibility

| |
|-----------------------------------|
| LJMU Schools involved in Delivery |
| LJMU Partner Taught |

Partner Teaching Institution

| |
|---------------------------------------------------|
| Institution Name |
| University of Shanghai For Science and Technology |

Learning Methods

| Learning Method Type | Hours |
|----------------------|-------|
| Lecture | 44 |
| Tutorial | 22 |

Module Offering(s)

| Display Name | Location | Start Month | Duration Number Duration Unit |
|--------------|----------|-------------|-------------------------------|
| JAN-PAR | PAR | January | 12 Weeks |

Aims and Outcomes

| | |
|------|-----------------------------------------------------------------------------|
| Aims | To introduce the essential principles of Thermodynamics and Fluid Mechanics |
|------|-----------------------------------------------------------------------------|

After completing the module the student should be able to:

Learning Outcomes

| Code | Number | Description |
|------|--------|----------------------------------------------------------------------------|
| MLO1 | 1 | Apply the laws of thermodynamics to open and closed systems |
| MLO2 | 2 | Analyse heat and work transfers during Thermodynamic processes and cycles. |
| MLO3 | 3 | Analyse hydrostatics and fluid flow. |
| MLO4 | 4 | Apply the governing equations of fluid dynamics for simplified flow. |

Module Content

| | |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Outline Syllabus | Thermodynamic definitions:- states, processes, paths, cycles, open and closed systems, pressure, temperature, energy-heat and work transfers. Concepts of work, energy and power. Zeroth and First Laws of Thermodynamics, application of the First Law - Non Flow and Steady Flow Energy Equations (NFEE & SFEE), internal energy, enthalpy. Equations of state of perfect gases and real gases. Analysis of Thermodynamic processes. Properties of mixtures, Gibbs-Dalton laws. Properties of vapours, steam calculations using tabulated data and charts. Brief introduction to the Second Law of Thermodynamics and entropy. Fluid Mechanics definitions:- pressure, density, dynamic/kinematic viscosity, static and dynamic fluid flow. Hydrostatics:- manometry, forces of submerged surfaces, buoyancy. Introduction to fluid dynamics and dimensional analysis. Visualisation methods of fluid flow, stream lines and stream tubes. Bernoulli's equation and continuity of flow for incompressible fluids. Laws of conservation applied to Fluid Flow. Applications of conservation of energy, conservation of mass and conservation of momentum equations. Brief introduction to losses in pipe fluid flow. |
| Module Overview | |
| Additional Information | This module introduces some of the most important fundamental ideas behind the development of core engineering disciplines of thermodynamics and fluid mechanics. The content sets the framework for further study during levels 5, 6 & 7. The module is supported by tutorial work which will help develop the necessary understanding and skill required of an engineering student. |

Assessments

| Assignment Category | Assessment Name | Weight | Exam/Test Length (hours) | Module Learning Outcome Mapping |
|---------------------|-----------------|--------|--------------------------|---------------------------------|
| Exam | Examination | 60 | 2 | MLO1, MLO2, MLO3, MLO4 |
| Test | In course tests | 40 | 0 | MLO1, MLO2, MLO3, MLO4 |
