Title: RESEARCH METHODS AND STATISTICS IN PSYCHOLOGY II
Status: Definitive
Code: **5000PSYSCI** (113650)
Version Start Date: 01-08-2021
Owning School/Faculty: Psychology
Teaching School/Faculty: Psychology

Team	Leader
Simon Cooper	Y
Marek Palace	
Daniel Roberts	
Susan Palmer-Conn	
Jennifer Chopra	

Academic Level: FHEQ5 **Credit Value:** 24 **Total Delivered Hours:** 73
Total Learning Hours: 240 **Private Study:** 167

Delivery Options

Course typically offered: Standard Year Long

Component	Contact Hours
Lecture	38
Workshop	34

Grading Basis: 40 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	Exam	Examination	20	1
Report	Quant rpt	Report	40	
Report	Qual rpt	Report	40	

Aims

1. *To examine the rationale behind and use of quantitative and qualitative methods in psychological research*
2. *To analyse data using advanced statistical procedures such as analysis of variance, regression analysis and analysis of covariance*
3. *To enable you to gain further experience of using SPSS to analyse data*
4. *To enable you to obtain practical experience of designing and conducting studies*
5. *To investigate the epistemological and ontological assumptions underlying the natural scientific paradigm and to explore epistemologies in qualitative methods.*

Learning Outcomes

After completing the module the student should be able to:

- 1 Design, conduct and report research in psychology using advanced quantitative statistics and grounded theory
- 2 Critically evaluate the strengths and weaknesses of published research studies
- 3 Choose appropriate methods to analyse data
- 4 Interpret analysis produced by a computer-based statistical package (SPSS)

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Exam	4		
Quantitative report	1	2	3
Qualitative report	1	2	3

Outline Syllabus

- *Reliability analysis*
- *One-way and factorial (independent, repeated measures and mixed) ANOVA.*
- *Analysis of covariance (ANCOVA)*
- *Multivariate analysis of variance (MANOVA)*
- *Bivariate and multiple regression analysis*
- *Effect size*
- *Philosophical development of and epistemological background to qualitative research*
- *Qualitative data gathering procedures*
- *Overview of qualitative methods, focusing on grounded theory*
- *Assessing quality in qualitative research.*

Learning Activities

A variety of teaching and learning strategies are employed in this module. These

include lectures and workshops for developing and practising statistical and other research skills. Workshop tutors will provide support and guidance with these tasks and assist you with any problems that you might experience in making best use of the lecture material. You will complete two practical projects, one using quantitative methods and the other using qualitative methods. Supervision will be provided for these by workshop tutors.

Notes

This module examines the rationale behind and use of quantitative and qualitative research designs in psychology. You will use the understanding gained to design, conduct and report studies using examples of the designs. You will be guided in data analysis methods for a range of designs using analysis of variance and other advanced analytical techniques. This will include the use of computer-based packages for the purposes of statistical analyses. A number of critical issues arising in relation to psychological research will also be examined.
