Publishing Year	2008
Title	Handbook of Cognitive Ageing
Subtitle	interdisciplinary perspectives
Edition	
Publisher	Sage
ISBN	

Notes

This module recognises that paramedics are increasingly expected to take a lead role in the maintenance of health, be that through incident prevention or the promotion of well-being. Students will be expected to engage with a range of health promotion theories and practices. These may be at the individual level and include issues such as stress management and the provision of health advice, or at the structural level, such as accident prevention work. The module will also encourage students to consider the role of the paramedic in working with vulnerable and disenfranchised groups, community engagement and social inclusion.
