

## Thermodynamics and Fluid Mechanics 2

### Module Information

2022.01, Approved

#### Summary Information

Module Code	5105MECH
Formal Module Title	Thermodynamics and Fluid Mechanics 2
Owning School	Engineering
Career	Undergraduate
Credits	20
Academic level	FHEQ Level 5
Grading Schema	40

#### Teaching Responsibility

LJMU Schools involved in Delivery
Engineering

#### Learning Methods

Learning Method Type	Hours
Lecture	22
Online	22
Tutorial	22

#### Module Offering(s)

Display Name	Location	Start Month	Duration Number Duration Unit
JAN-CTY	CTY	January	12 Weeks

#### Aims and Outcomes

Aims	To provide an insight into thermal plant cycles and the physical behaviour of fluid flow and heat transfer by application of the theory to practical engineering examples.
------	--

**After completing the module the student should be able to:**

**Learning Outcomes**

Code	Number	Description
MLO1	1	Analyse thermal vapour plant cycles
MLO2	2	Examine gas power plant cycles and combustion processes
MLO3	3	Apply the governing equations for modes of heat transfer
MLO4	4	Analyse flow in pipe networks and behaviour of compressible fluids

**Module Content**

Outline Syllabus	The second law of thermodynamics and entropy.Steam power plant, energy balances and cycle improvements.T-S diagrams and entropy changes for gases, vapours and liquids.Refrigeration, heat pumps, properties of refrigerants and operating cycles.Gas turbines cycle analysis, methods of efficiency improvements and application to combined heat and power plant.IC Engines:- Spark/compression ignition, two/four stroke, operating cycles.Stoichiometry:- combustion, exhaust emissions and associated pollution.Modes of heat transfer:- conduction, convection and thermal radiation.Multimode/2D heat transfer.Introduction to types of heat exchangers:- plate, compact, shell and tube.Log mean temperature difference (LMTD) method of heat exchanger analysis.Laminar and turbulent pipe flow, friction and minor losses in pipes and pipe networks. Pumps and pump characteristic curves.Descriptive treatment of real fluid flow. 1-d compressible flow. Mach no., isentropic flow, stagnation conditions, use of tables. Flow through nozzles. Choked conditions. Critical pressure ratio.
Module Overview	This module will provide an insight into thermal plant cycles and the physical behaviour of fluid flow and heat transfer by application of the theory to practical engineering examples.
Additional Information	This module continues the development of the fundamental ideas behind the development of core engineering disciplines of thermodynamics and fluid mechanics. Further the student will be exposed to real engineering calculation and the performance analysis of thermal plant.The module is supported by tutorial work which will help develop the necessary understanding and skill required of an engineering student.

**Assessments**

Assignment Category	Assessment Name	Weight	Exam/Test Length (hours)	Module Learning Outcome Mapping
Centralised Exam	Examination	60	2	MLO1, MLO2, MLO3, MLO4
Test	VLE Test	40	0	MLO1, MLO2, MLO3, MLO4

**Module Contacts**

**Module Leader**
