

Liverpool John Moores University

Title: DRUG EFFECTS AND TOXICOLOGY
Status: Definitive
Code: **5504CPFOUX** (106602)
Version Start Date: 01-08-2011

Owning School/Faculty: Pharmacy & Biomolecular Sciences
Teaching School/Faculty: Pharmacy & Biomolecular Sciences

Team	Leader
Mark Murphy	Y
Kenneth Ritchie	
Lesley Walton	
Suzanne McColl	
Philip Rowe	

Academic Level: FHEQ5 **Credit Value:** 12.00 **Total Delivered Hours:** 25.50
Total Learning Hours: 120 **Private Study:** 94

Delivery Options

Course typically offered: Semester 2

Component	Contact Hours
Lecture	23.000
Workshop	1.000

Grading Basis: 40 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	ASS1	3 essays questions from 5	60.0	1.50
Report	ASS2	in vitro toxicity testing assignment. Data analysis/interpretation and short answer questions.	40.0	

Aims

To provide an introduction to the interactions of foreign compounds with biological systems, including their absorption, distribution, metabolism and elimination.

To provide an introduction to molecular mechanisms of toxicity.
To provide an overview of the pathology associated with chemical-associated cell injury and death.
To provide an introduction to forensic toxicology.

Learning Outcomes

After completing the module the student should be able to:

- 1 Explain the absorption, distribution and elimination of drugs and other xenobiotics
- 2 Explain the major molecular mechanisms of toxicity, and describe and recognise significant cellular pathological changes associated with such toxicity.
- 3 Describe the fundamentals of forensic toxicology

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

essay style questions	1	2	3
data analysis/interpretation	2		

Outline Syllabus

Principles of pharmacokinetics: Absorption, distribution, metabolism and excretion of drugs and other xenobiotics.

The significance of biotransformation in toxicology: Variations in response, effects of genetics, age, sex, species and disease.

Mechanisms of toxicity: Free radicals, lipid peroxidation and reversible and irreversible interactions of chemicals with cellular macromolecules. Protective agents; antioxidants and glutathione. Carcinogenicity.

Structural manifestations of toxicity: Pathological changes occurring in cells and tissues. Cell injury; degeneration, inflammation, cell death. Atrophy, hyperplasia, hypertrophy, metaplasia, dysplasia and neoplasia. Restructuring and repair of cells and tissues.

Introduction to forensic toxicology: Identification of drugs and poisons in biological samples.

Case studies: consideration of the pharmacokinetics, mechanism of toxicity, pathology and clinical relevance of selected drugs/chemicals.

Learning Activities

Lectures and workshops

Notes

To provide an introduction to the interactions of foreign compounds with biological systems, including their absorption, distribution, metabolism and elimination.

To provide an introduction to the molecular mechanisms of toxicity.

To provide an overview of the pathology associated with drug-associated cell injury and death.

To provide an overview of the procedures for assessing the potential toxicity of a novel chemical entity.
