Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	AS1	Exam 4 from 6 Questions	60.0	2.00
Essay	AS2	Coursework	20.0	
Essay	AS3	Speaker Design	20.0	

Aims

To understand the behaviour of sound in a studio environment.

To investigate microphones and loudspeakers and noise reduction systems.

Learning Outcomes

After completing the module the student should be able to:

- 1 Carry out decibel calculations
- 2 Apply concepts such as standard pressure level, intensity level, acoustic impedance
- 3 Calculate acoustic transmission levels through walls, reverberation times
- 4 Design the acoustic treatment of a room
- 5 Describe the best placement of microphones
- 6 Design a speaker

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

EXAM	1	2	3	4	5
CW	5				
CW	6				

Outline Syllabus

The nature of sound: wavelength, sound pressure and intensity. Sound in rooms and buildings: standing waves, reverberation time, transmission, Sound directivity

Use of decibels, octaves, semi-tones

Microphone types, directivity and placement; loudspeaker design principles

Learning Activities

By a series of lectures, supported by practical workshops.
