Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Report	AS1	Information System Design	100	

Aims

To provide an understanding of the underlying technologies and concepts relating to advanced information systems.

Learning Outcomes

After completing the module the student should be able to:

- 1 Critically evaluate the technological options available for advanced information systems
- 2 Critically evaluate the arguments, assumptions and abstract concepts underlying advanced information systems.
- 3 Assess various solutions to an advanced information system relating to a given organisational problem.
- 4 Apply appropriate methods and techniques to the design of an advanced information system

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Information System Design	1	2	3	4
---------------------------	---	---	---	---

Outline Syllabus

Decision support systems
Decision support applications
Developing decision support systems
Evaluating decision support systems
Data mining approaches
Modelling and analysis
Geographical information systems
Collaborative systems
Web analytics
Knowledge based systems
Artificial intelligence

Learning Activities

Formal theory will be introduced via lectures and practical knowledge will be acquired via practical labs, and coursework.

Notes

This module explores the theories and practical application of advanced information systems in organisations.
