After completing the module the student should be able to:

Learning Outcomes

Code	Number	Description
MLO1	1	Solve practical fluid flow problems
MLO2	2	Predict lift and drag forces associated with external flows
MLO3	3	Analyse heat transfer phenomena
MLO4	4	Evaluate heat exchanger performance using standard techniques

Module Content

Outline Syllabus	Governing equations of viscous flow. Navier –Stokes and Continuity Equations. Prantl boundary layer equation, Blasius solution and simplified working relationships. VonKarman momentum integral and turbulent boundary layers structure. Streamline and bluff bodies, lift and drag coefficients, boundary layer separation and wake, wind tunnel testing. Analytical and numerical methods applied to multi-mode heat transfer problems including radiation, conduction and convection. Heat Exchanger analysis including Log means temperature difference (LMTD), Heat exchanger effectiveness method (NTU).
Module Overview	
Additional Information	This module takes an in-depth look into the governing equation and theory of the complex area of fluid flow and heat transfer. The underpinning ideas are delivered by lectures and tutorials which requires the student to have a fundamental understanding of the principles and how to apply them to practical situations.
