

## Module Information

2022.01, Approved

### Summary Information

Module Code	6512USST
Formal Module Title	Manufacturing Processes and Industrial Automation
Owning School	Engineering
Career	Undergraduate
Credits	10
Academic level	FHEQ Level 6
Grading Schema	40

### Teaching Responsibility

LJMU Schools involved in Delivery
LJMU Partner Taught

### Partner Teaching Institution

Institution Name
University of Shanghai For Science and Technology

### Learning Methods

Learning Method Type	Hours
Lecture	22
Practical	6
Tutorial	11

### Module Offering(s)

Display Name	Location	Start Month	Duration Number Duration Unit
SEP-PAR	PAR	September	12 Weeks

## Aims and Outcomes

Aims	This module will deliver a broad introduction to industrial automation, and cover policy and logistical considerations that drive process solutions. The participants will work on automation and assembly problems and cultivate a deep understanding of electronic, electrical and pneumatic control.
------	---

**After completing the module the student should be able to:**

### Learning Outcomes

Code	Number	Description
MLO1	1	Appraise the characteristics of the elements of automation systems including material planning and control policies
MLO2	2	Critically evaluate the social and economic impact of industrial automation
MLO3	3	Critically analyse automation problems and design suitable assembly processes solutions
MLO4	4	Appraise the electronic, electrical and pneumatic devices needed to control industrial equipment
MLO5	5	Appraise the basic concepts of dynamic system response and closed loop control
MLO6	6	Simulate the behaviour and tuning of PID controllers

## Module Content

Outline Syllabus	Manufacturing Automation Operations planning, lean manufacturing, inventory control and scheduling. Principles of production layout, manual assembly lines, automated assembly systems, cellular manufacturing. The automation of assembly processes, mechanical, flexible and hybrid systems, flexibility in assembly. The systematic evaluation of product suitability for flexible assembly operations. Material handling and identification technology. Quality systems and inspection technologies. Process Control Introduction to Control Systems including systems models and PID Control. Use of LabView for control system analysis. Fluid Power Systems Automation components and sensing devices Drive systems and PLC control of automated systems Robot systems: kinematics, dynamics and control. Sensor systems: force, vision
Module Overview	
Additional Information	The module explores modern manufacturing principles and provides an understanding of Lean manufacturing, computer integrated manufacturing, automation and the use of control systems in manufacturing.

## Assessments

Assignment Category	Assessment Name	Weight	Exam/Test Length (hours)	Module Learning Outcome Mapping
Exam	Examination	70	2	MLO1, MLO2, MLO3, MLO4, MLO5, MLO6
Portfolio	Portfolio	30	0	MLO1, MLO2, MLO3, MLO4, MLO5, MLO6

## Module Contacts

### Module Leader

Contact Name	Applies to all offerings	Offerings
Rob Darlington	Yes	N/A

### Partner Module Team

Contact Name	Applies to all offerings	Offerings
