

Liverpool John Moores University

Title: MSc Project
Status: Definitive
Code: **7000MSC** (121669)
Version Start Date: 01-08-2021

Owning School/Faculty: Engineering
Teaching School/Faculty: Engineering

Team	Leader
Philip Davies	Y
Hamid Sarwar	
David Allanson	

Academic Level: FHEQ7 **Credit Value:** 60 **Total Delivered Hours:** 2

Total Learning Hours: 600 **Private Study:** 598

Delivery Options

Course typically offered: Standard Year Long

Component	Contact Hours
Seminar	2

Grading Basis: 50 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Report	AS1	Project Planning document/Interim Report	20	
Report	AS2	Project Thesis	60	
Presentation	AS3	Presentation and Oral Examination	20	

Aims

The main aims of the project module are to demonstrate the student's ability to lead and self manage their own deep/thorough investigation, undertake high quality academic research and demonstrate critical evaluation of their results.

Learning Outcomes

After completing the module the student should be able to:

- 1 Undertake a structured research programme into an appropriate engineering field
- 2 Formulate a research plan and manage the resulting activities
- 3 Demonstrate the ability to critically analyse and reflect on the work of other practitioners/researchers
- 4 Demonstrate a deep technical understanding of their project and associated field of engineering
- 5 Produce and defend an academic thesis that demonstrates the standard of scholarly activity commensurate with a level 7 post-graduate qualification

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Project plan	2	3		
Thesis	1	3	4	5
Presentation	1	2	3	5

Outline Syllabus

Projects may involve experiment, analysis, design and/or computation and should allow a student to demonstrate achievement of the module learning outcomes

Learning Activities

The project will be supported by regular meeting with a project supervisor.

Notes

This is a very important module that represents 600 hours of self-driven scholarly activity.

When considering a project it would be appropriate to select/choose a project in a subject area strongly associated with the MSc programme and/or one of the taught modules. For most students, this really means using the project as a means to develop a particular subject specialism, one that is aligned with future career objectives.

Completion of the project module allows the student to concentrate fully on an area of work and hence develop a high level of subject knowledge and associated skills in that field.

Completion of the project requires the production of an academic thesis. The thesis is a level 7 piece of work and as such would be expected to demonstrate a high level of scholarly activity.

The choice of subject and formulation of the aims and objectives are mutually agreed between student and supervisor. Industrially based projects are acceptable as long as they offer the appropriate technical level and resources are available so as to ensure completion. Projects undertaken within the University would be judged by the same requirements.

The main criteria being that the project and associated thesis must demonstrate the student's ability to drive their own deep/thorough investigation and demonstrate critical evaluation of the results and comparison with other published ideas/results/designs. These requirements have to be evidenced via the presentation of a well-constructed, well-presented and well-defended academic thesis and good performance in an associated oral examination. The best projects are often associated with supervisors that are undertaking scholarly activity/research or associated with some experimental work being undertaken by industrial collaborators.
