

## Liverpool John Moores University

Title: FORECASTING FINANCIAL MARKETS  
Status: Definitive  
Code: **7011BUSAE** (100192)  
Version Start Date: 01-08-2011

Owning School/Faculty: Liverpool Business School  
Teaching School/Faculty: Liverpool Business School

Team	Leader
Christian Dunis	Y

**Academic Level:** FHEQ7  
**Credit Value:** 15.00  
**Total Delivered Hours:** 54.00  
**Total Learning Hours:** 150  
**Private Study:** 96

### Delivery Options

Course typically offered: Semester 2

Component	Contact Hours
Lecture	26.000
Workshop	26.000

**Grading Basis:** 40 %

### Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	AS1	Exam	67.0	2.00
Essay	AS2	1 assignment (includes a presentation)	33.0	

### Aims

*To enable the student to formulate investment decisions using information derived from advanced forecasting techniques.*

### Learning Outcomes

After completing the module the student should be able to:

- 1 Use a large variety of forecasting techniques: technical analysis, linear and non-linear parametric models, and non-parametric methods.
- 2 Critically apply both emerging and more traditional forecasting methodologies to real world financial problems.

### Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

EXAM	1
CW	2

### Outline Syllabus

1. *Charting analysis*
2. *Mechanical systems used in technical trading systems.*
3. *Traditional Time Series Analysis and Financial Econometrics.*
4. *Asset Allocation Between Models.*
5. *Time-varying Parameter Models for Financial Time Series*
6. *Non-parametric Models for Nonlinear Financial Time Series*

### Learning Activities

The module will consist of standard lectures, tutorials and IT based workshops.

Notes

Recent years have seen an exponential growth in the use of technical and quantitative analysis in fund management and trading. Furthermore, quantitative methods have become essential in the ever more important field of risk management and analysis. Today, financial markets professionals are therefore expected to be able to use a large variety of techniques from their toolbox: technical analysis, linear and nonlinear parametric models, and non-parametric methods.

The coursework provides an opportunity for formative feedback; the examination is the terminal summative assessment.
