Module Content

Outline Syllabus	- Concepts associated with Projects and Project Management- Project Success and Failure- Project Life Cycle Management- Role of the Project Manager- Organisational Approaches to Project Management- Planning Implementing, Monitoring and Controlling- Project Management Information Systems- Use of Microsoft Project for planning, monitoring and controlling
Module Overview	This module aims to investigate the context and processes of project management and to develop skills in the use of project management techniques.
Additional Information	Project Management requires project management knowledge, transferable skills, such as presenting, and the ability to use project management tools, such as 'MS-Project'. The coursework will include a group submission involving the simulation of a project team, with students working together to plan and define a project of their choice, which has been agreed by the tutor. Project teams are required to present their findings to tutors from the module team. Formative feedback will be provided on this piece of work before the submission of the final part of the coursework which is assessed as an individual's piece of work.
