Academic Level: FHEQ7
Credit Value: 20
Total Delivered Hours: 43

Total Learning Hours: 200
Private Study: 157

Delivery Options

Course typically offered: Semester 2

| Component | Contact Hours |
|-----------|---------------|
| Lecture | 20 |
| Practical | 18 |
| Workshop | 3 |

Grading Basis: 50 %

Assessment Details

| Category | Short Description | Description | Weighting (%) | Exam Duration |
|----------|-------------------|--|---------------|---------------|
| Exam | EX1 | Exam will comprise but not be limited to short/long answer questions and data interpretation/problem solving questions | 60 | 2 |
| Report | CW1 | The design will be based on a project to manufacture an assigned pharmaceutical product | 40 | |

Aims

To understand and apply the principles of good manufacturing practice to the production and quality control of pharmaceutical products.

Learning Outcomes

After completing the module the student should be able to:

- 1 Display mastery of applying the appropriate testing procedures to ensure the quality of sterile and non-sterile dosage forms and interpreting the data generated.
- 2 Demonstrate expertise in the understanding and application of the principles of good manufacturing practice in the production of sterile and non sterile pharmaceutical products.

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

| | |
|--------|---|
| Exam | 1 |
| Report | 2 |

Outline Syllabus

GMP

Milling, mixing, granulation, drying

Freeze Drying

Process Scale-up

Process Analytical Technology (PAT)

Tableting, compaction simulation

Quality Control Testing

Sterilisation process

Sterile Product Testing

Sterilisation Validation

Learning Activities

Lectures covering each topic within the module

Practical sessions giving students first-hand experience of relevant manufacturing techniques

Performing laboratory based activities plus writing reports, which includes data analysis

Workshops on ICH guidelines and their application in practice and to support analysis of data generated during practical sessions

Notes

Practical sessions will involve students developing hands-on experience of the manufacturing procedures in the production of sterile (injectable ampoules, eyedrops) and non-sterile (tablets) pharmaceutical dosage forms as well as the pharmacopoeial standard QC testing procedures used.

Exam will assess students understanding of the principles through data interpretation/problem solving questions
