Liverpool John Moores University

Title:	Operations Research
Status:	Definitive
Code:	**7124ENG** (120126)
Version Start Date:	01-08-2019

Owning School/Faculty: Maritime and Mechanical Engineering
Teaching School/Faculty: Maritime and Mechanical Engineering

Team	Leader
Trung Thanh Nguyen	Y

Academic Level:	FHEQ7	**Credit Value:**	10	**Total Delivered Hours:**	20
Total Learning Hours:	100	**Private Study:**	80		

Delivery Options
Course typically offered: Runs Twice - S1 & S2

Component	Contact Hours
Lecture	12
Tutorial	6

Grading Basis: 50 %

Assessment Details

Category	Short Description	Description	Weighting (%)	Exam Duration
Exam	AS2	Examination	70	2
Report	AS1	Coursework in the form of lab-based, online assignments	30	

Aims

This module introduces a set of fundamental techniques and tools to assist engineers/managers in making better decisions onin real world management/business problems. It will teach you how to model an operational problem in your business or organisation, how to select and apply a quantitative method to solve it, and how to interpret the results to make a better management decision.

Learning Outcomes

After completing the module the student should be able to:

1   Familiar with fundamental mathematical modelling tools used in Operations Research (OR)
2   Model a problem and apply the most appropriate tools to solve solving or optimise optimising it
3   Interpret the results to make a better management/business decision

Learning Outcomes of Assessments

The assessment item list is assessed via the learning outcomes listed:

Examination   1   2   3

Lab based online   2   3
assignments

Outline Syllabus

Quantitative methods. Operations Research. Operations Research (OR) solver software.

Mathematical Programming: Modelling problems in mathematical programming, Solving operational/management problems using mathematical programming techniques.

Sensitivity Analysis: Effect of changes on current optimal settings, Changes in profit or cost, Changes in the availability/capacity/demand of resources. Addition of new products/activities/constraints.

Network models and applications: Network modelling and designing networks, Finding the least amount of travel/lines/cables to connect multiple locations. Finding the shortest transport route, Maximising amount of goods sent between locations.

Applications of transport models: Dealing with product supplies and demands in multiple locations, . Production scheduling to meet future demands, Allocation of workers/machines to jobs, Transhipment problems

Learning Activities

Lectures, tutorial and practicals

Notes

The module is designed to deliver students with the skills to apply research methods,

modelling and quantitative techniques in an engineering context
