#### Aims and Outcomes

Aims	This module aims to consider what intelligence and analysis means. In doing so it addresses a number of fundamental issues, including the important issue of what is meant by the concept of intelligence. This is enhanced by debates between a variety of discourses of what is intelligence. It is further enhanced by correcting and/or eradicating misperceptions of intelligence and analysis (the 'myths of intelligence'). It examines in both theoretical and practical operational terms the overall role of intelligence analysis, particularly its application to security related issues pertaining to law enforcement, government agencies and the private sector in preventing and combating crime by the use of proactive intelligence.
