

Evidence Based Low Intensity Treatments for Common Mental Health Disorders

Module Information

2022.01, Approved

Summary Information

Module Code	7201PQHEAL
Formal Module Title	Evidence Based Low Intensity Treatments for Common Mental Health Disorders
Owning School	Psychology
Career	Postgraduate Taught
Credits	20
Academic level	FHEQ Level 7
Grading Schema	50

Teaching Responsibility

LJMU Schools involved in Delivery
Psychology

Learning Methods

Learning Method Type	Hours
Lecture	30
Practical	60

SEP-CTY	CTY	September	12 Weeks

Aims and Outcomes

Aims	Psychological Well Being Practitioners (PWPs) aid clinical improvement through the provision of information and support for evidence-based low-intensity psychological treatments and regularly used pharmacological treatments of common mental health problems. Low-intensity psychological treatments place a greater emphasis on patient self-management and are designed to be less burdensome to people undertaking them than traditional psychological treatments. The overall delivery of these interventions is informed by behaviour change models and strategies. Develop general and disorder defined knowledge and competence for the safe management and delivery of evidence based low intensity psychological and pharmacological interventions for common mental health problems Demonstrate knowledge of self management recovery options and competence in deliver low-intensity interventions using a range of methods. This module will, therefore, equip PWPs with a good understanding of the process of therapeutic support and the management of individuals and groups of patients including families, friends and carers. Skills teaching will develop PWPs general and disorder-defined 'specific factor' competencies in the delivery of low intensity treatments informed by cognitive-behavioural principles and in the support of medication concordance including face-to-face, telephone and electronic communication. Demonstrate an understanding of the process of therapeutic support through case management, including change to risk status
------	--

After completing the module the student should be able to:

Learning Outcomes

Code	Number	Description
MLO1	1	Critically evaluate a range of evidence-based interventions and strategies to assist patients manage their emotional distress and disturbance.
MLO2	2	Demonstrate knowledge of, and competence in developing and maintaining a therapeutic alliance with patients during their treatment programme, including dealing with issues and events that threaten the alliance
MLO3	3	Demonstrate competence in planning a collaborative low-intensity psychological or pharmacological treatment programme for common mental health problems, including managing the ending of contact.
MLO4	4	Demonstrate in-depth understanding of, and competence in the use of, a range of low-intensity, evidence-based psychological interventions for common mental health problems.
MLO5	5	Demonstrate knowledge and understanding of, and competence in using behaviour change models and strategies in the delivery of low-intensity interventions.
MLO6	6	Critically evaluate the role of case management and stepped care approaches to managing common mental health problems in primary care including ongoing risk management appropriate to service protocols.
MLO7	7	Demonstrate knowledge of, and competence in supporting people with medication for common mental disorders to help them optimise their use of pharmacological treatment and minimise any adverse effects.
MLO8	8	Demonstrate competency in delivering low-intensity interventions using a range of methods including face-to-face, telephone and electronic communication.

Module Content

Outline Syllabus	Evidence based low Intensity interventions for depression and anxiety. Examples of interventions include providing support for a range of low-intensity self-help interventions (often with the use of written self-help materials) informed by cognitive-behavioural principles, such as behavioural activation, exposure, cognitive restructuring, panic management, problem solving, CBT-informed sleep management, and computerised cognitive behavioural therapy (cCBT) packages as well as supporting physical exercise and medication adherence Methods of delivery which includes: support specifically designed to enable people to optimise their use of self-management recovery information and pharmacological treatments and which may be delivered individually or to groups of patients (psychoeducational groups) and through face-to-face, telephone, email or other contact methods. PWP's must also be able to manage any change in risk status. . Session planning and subsequent sessions. Maintaining therapeutic alliances. Decision making. Case Management. Stepped Care. Managing the ending of contact.
Module Overview	This module demonstrates experience and competence in the selection and delivery of treatment of a range of presenting problems. It uses evidence-based low intensity interventions across a range of problems including depression and two or more anxiety disorders.
Additional Information	<p>All assessments must be passed independently to achieve the credits for the module. Learning outcomes are assessed in both theory and practice. Module assessment strategy</p> <p>1) Skills assessment - standardised role-play scenario(s) where trainees are required to demonstrate skills in undertaking both triage within an IAPT service and problem focused assessments. This may be a single scenario, combining both triage within an IAPT service and problem focused assessments, or two shorter assessment scenarios. This (these) will be video-recorded and assessed by teaching staff using standardised assessment measures. Marked as Pass/Fail (with 50% pass threshold)</p> <p>2) Academic assignment: trainees should also provide a reflective critical analytical essay on their performance on the skills assessment. Graded (pass mark of 50%)</p> <p>3) Successful completion of the following practice aspect of the learning outcomes, to be formatively assessed by means of a practice outcomes portfolio (Practice Skills Assessment Document). Marked as Pass/Fail (with 50% pass threshold):</p> <ul style="list-style-type: none"> • Demonstrates experience and competence in the selection and delivery of treatment of a range of presenting problems using evidence based low intensity interventions across a range of problem descriptor including depression and two or more anxiety disorders • Demonstrates the ability to use common factor competencies to manage emotional distress and maintain therapeutic alliances to support patients using low-intensity interventions • Demonstrates high quality case recording and systematic evaluation of the process and outcomes of mental health interventions, adapting care on the basis of these evaluations <p>These 3 learning outcomes will be summatively assessed in module 7202PQHEAL</p> <p>The training programme requires trainees to learn from observation and skills practice under supervision while working in fully functioning IAPT services, as well as through the theoretical teaching, skills practice and practice-based learning directed by the Higher Education Institute. Trainees should complete a minimum of 80 clinical contact hours with patients (face-to-face or on the telephone) within an IAPT service as a requirement of their training and should undertake a minimum of 40 hours of supervision of which at least 20 hours should be case management supervision and at least 20 hours should be clinical skills supervision. These 80 clinical contact hours and 40 supervision hours are in addition to the 15-20 practice-based learning days directed by education providers. These requirements will be identified in the Practice Placement Skills document (PSAD). This module runs as part of the Post Graduate Certificate: Improving Access to Psychological Therapies</p> <p>The module learning outcomes align with the QAA framework for higher education qualifications in England, Wales and Northern Ireland. The module is aligned to Level 7 descriptors. The module involves classroom attendance, which is further supported by a range of learning support opportunities and practice based learning. The course is delivered both on a full time basis over 52 weeks and as a an additional option of up to a further 12 months in order that part time students can complete the clinical requirement of the programme</p> <p>The criteria for admission to the module require that candidates must have an Honours Degree of 2:2 or above or demonstrate equivalent portfolio evidence. The final award is a Continuing Professional Development –Evidence-based Low Intensity Treatments for Common Mental Health Disorders</p> <p>The students have access to a Canvas site and the University's other range of electronic support such as access to the electronic library facilities. The module has continued to develop with an up to date Canvas site reflecting contemporary reading lists, links to journal articles and a number of presentations for students to access on areas such as critical writing and library support. The students also have a</p>
