

# **Computer Security**

# **Module Information**

**2022.01, Approved** 

## **Summary Information**

Module Code	7504COMP		
Formal Module Title	imputer Security		
Owning School	Computer Science and Mathematics		
Career	Postgraduate Taught		
Credits	20		
Academic level	FHEQ Level 7		
Grading Schema	50		

#### **Teaching Responsibility**

LJMU Schools involved in Delivery	
LJMU Partner Taught	

#### **Partner Teaching Institution**

Institution Name	
Unicaf	

## **Learning Methods**

Learning Method Type	Hours
Online	33

# Module Offering(s)

Display Name	Location	Start Month	Duration Number Duration Unit
SEP-PAR	PAR	September	12 Weeks

### **Aims and Outcomes**

Aims	To develop an understanding of Computer Security and to understand security threats and vulnerabilities to information, computing and communications systems. To critically assess a variety of security technologies for protection of computer devices/systems/networks.  To promote the use of appropriate methodologies and tools in the analysis, design, implementation of secure systems.  To examine current research issues in Computer Security.
------	--

### After completing the module the student should be able to:

## **Learning Outcomes**

Code	Number	Description
MLO1	1	Critically review current research issues and developments in computer security.
MLO2	2	Critically evaluate a complex computer security problem.
MLO3	3	Apply complex skills relating to security techniques and tools to secure a computer system.

## **Module Content**

Outline Syllabus	Computer security background; security goals, design and principles, problems, models. Security services: authentication, key management and PKI.  Security technologies including firewalls, intrusion detection systems, intrusion prevention systems, biometrics, anti-viruses, access controls, administrative security and database management.  Malware: viruses and worms, botnets, ransomware, spyware.  Securing devices and network from attack; safe use of the Internet, the Internet of Things (IoT), defense-in-depth.  Access control: importance, principles, Bell-LaPadula, Chinese Wall, Biba. Cryptographic techniques: algorithms, protocols, authentication, key management and PKI.  Introducing security research topics; e.g. advanced persistent threats, trusted computing, composition, digital rights, IoT security and privacy concerns, big data.
Module Overview	
Additional Information	This advanced course is intended for postgraduate students interested in the field of computer security. The purpose of the course is to provide the fundamental technical concepts and research issues essential for computer security. This module develops the understanding of threats to and the security requirements of computer systems, as well as tools and techniques to enforce security.

### **Assessments**

Assignment Category	Assessment Name	Weight	Exam/Test Length (hours)	Module Learning Outcome Mapping
Report	Research report	40	0	MLO1
Technology	Solution development	60	0	MLO2, MLO3

## **Module Contacts**

**Module Leader** 

Contact Name	Applies to all offerings	Offerings
Aine Mac Dermott	Yes	N/A

#### **Partner Module Team**
