IC System Design

Module Information

2022.01, Approved

Summary Information

Module Code	7531ESIST
Formal Module Title	IC System Design
Owning School	Engineering
Career	Postgraduate Taught
Credits	20
Academic level	FHEQ Level 7
Grading Schema	50

Teaching Responsibility

LJMU Schools involved in Delivery
LJMU Partner Taught

Partner Teaching Institution

Institution Name
Sri Lanka Technological Campus

Learning Methods

Learning Method Type	Hours
Lecture	11
Practical	22
Tutorial	11

Module Offering(s)

Display Name	Location	Start Month	Duration Number Duration Unit
SEP-PAR	PAR	September	12 Weeks

Aims and Outcomes

Aims	The module aims to gain knowledge and understanding of a range of advanced IC digital design and analysis methods and to develop the design and test techniques required for modern digital microelectronic IC systems.

After completing the module the student should be able to:

Learning Outcomes

Code	Number	Description
MLO1	1	Appraise concepts, principles and theories of digital IC circuit and system design to the appropriate level.
MLO2	2	Appraise appropriate hardware and software used in the field of digital IC system design.
MLO3	3	Develop advanced skills in microelectronic system design, at the gate, RTL and system level.
MLO4	4	Evaluate digital IC system design, to enable appreciation of its scientific and engineering context, and to support their understanding of historical, current, and future developments and technologies.

Module Content

Outline Syllabus	Review of combinational and sequential circuit design.Semi-custom digital system design, FPGA based digital system design.Digital system design, simulation and synthesis using Verliog HDL.Microelectronic system design at register and system levels.Considerations for high speed systems, metastability and clock distributionDesign of test bench and build-in test structure.Simulation, implementation and testing of medium scale systems.Design of digital IC systems utilizing embedded microprocessors and memories.Emerging technologies, future important devices, new design methods.
Module Overview	
Additional Information	This level 7 module gives the student an advanced knowledge of the design and test techniques required for modern digital IC systems. Extensive practical designs are carried out with the help of modern ECAD software and hardware development boards.The United Nations Sustainable Development Goals4. Quality Education7. Affordable and Clean Energy8. Decent Work and Economic Growth9. Industry, Innovation and Infrastructure

Assessments

Assignment Category	Assessment Name	Weight	Exam/Test Length (hours)	Module Learning Outcome Mapping
Report	Report	100	0	MLO1, MLO2, MLO3, MLO4
